1. Claim 3 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim 3 only recites that the cam ring is engageable with both the upper and lower segments; however, claim 1 already recites that the cam ring is in direct engagement with the upper and lower tread mold members (which comprise the upper and lower segments, respectively). Therefore, claim 3 does not recite additional structure of the mold, and thus does not further limit the subject matter of claim 1.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Great Britain Patent 1,248,891 (Figures 1-5).

British '891 teaches a vulcanizing mold comprising upper and lower sidewall mold members integrally attached to upper and lower base plates, upper 42 and lower 10 tread mold members indirectly attached to the upper and lower base plates and being constituted of upper segments and lower segments, respectively, the upper and lower segments being displaceable only radially relative to the upper and lower sidewall mold members, a single cam ring 43 in direct

Application/Control Number: 09/431,154

Art Unit: 1722

engagement with the upper and lower tread mold members (see especially Figures 4 and 5, showing that the cam ring engages with a tapered portion of the lower segments 11 which is radially outward from the recess 34), the cam ring being always in engagement with the upper segments, the cam ring being adapted to be displaced independently of approaching displacements of the sidewall mold members toward each other to thereby simultaneously displace the upper and lower segments radially inwards while the upper and lower segments are in abutment with each other, and abutment means 79, 80 on the upper base plate and the cam ring for defining the upper limit position of the cam ring relative to the upper base plate. British '891 also teaches a method of vulcanizing a tire with such a mold, the method comprising displacing the upper and lower sidewall mold members toward each other so that the upper and lower segments are brought into abutment with each other, and operating the cam ring to simultaneously displace all of the segments radially inwards relative to the upper and lower sidewall members, with the upper segments in abutment with the lower segments.

Applicant's arguments filed Oct. 9, 2001, have been fully considered but they are not persuasive.

Applicant argues that British '891 does not teach that the cam ring is in direct engagement with the lower segments; however, such is clearly shown in Figures 4 and 5, wherein the inwardly tapered surface of the cam ring engages with an outwardly tapered surface of the lower segments 11 (which is radially outwardly from the recess 34).

Art Unit: 1722

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Mackey whose telephone number is (703) 308-1195. The examiner can normally be reached on Monday-Friday from 8:30AM to 6:00PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Nam Nguyen, can be reached at (703) 308-3322. The fax phone number for this Group is (703) 305-7718.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0651. Any inquiry relating to the contents or papers filed in this application, other than issues of substance requiring the attention of the Examiner, should be directed to the Customer Service Office, Technology Center 1700, whose telephone number is (703) 306-5665.
